Premessa / Preliminary

Questo rapporto contiene i dati sperimentali registrati durante l'esecuzione del test eseguito sul prodotto in oggetto. I risultati del test sono presentati sotto forma di tabelle riassuntive per agevolare l'interpretazione. La prima parte fornisce informazioni circa il committente, il prodotto testato, il tipo di test, il laboratorio esecutore, le date di inizio e di fine studio e l'identità degli sperimentatori. La seconda parte descrive il protocollo sperimentale. La terza parte riporta i risultati e le conclusioni. La quarta parte riporta bibliografia e riferimenti.

*This report contains the experimental data compiled during the study of the test product.
The test results are presented in a concise table format for easy interpretation.
The first part provides information regarding sponsor and test product identifications, assay type, entrusted laboratory, study initiation and completion dates and supervisory personnel.
The second part describes the study design, including materials and procedures.
The test results are presented in the third part of the report.
The bibliography and references are presented in the fourth and last part of the report.*

Dichiarazione di limitazione di Responsabilità / Disclaimer

In accordo con le linee guida COLIPA, il saggio è stato effettuato con l'assunzione che lo Sponsor, sotto la sua responsabilità, ha fornito al personale del Centro Studi clinici Abich informazioni veritiere su qualunque ingrediente del prodotto di potenziale rilievo tossicologico. Sulla base di tali informazioni sono stati preliminarmente e favorevolmente considerati sia il profilo tossicologico del prodotto che implicazioni etiche circa suo utilizzo nel presente saggio.

*According to COLIPA guidelines, the test was performed with the assumption that the Sponsor under its responsibility provided to the personnel of the Abich Clinical study Center, truthful information on any ingredient of the test product endowed with potential toxicological relevance.
On the basis of such information, a general assessment of the toxicological information concerning the product was preliminarily carried out and ethical implications as to its use during the present study have been considered.*

Autenticita' dei Risultati / Authenticity of Results

Lo studio oggetto del presente rapporto è stato condotto in accordo alle procedure interne di qualità di Abich S.r.l.. Lo studio è stato condotto, ove applicabile, in accordo con i principi delle GCP (Good Clinical Practice). Tutte le osservazioni e i dati registrati durante questo studio sono stati inclusi nel presente dossier.

The study covered by this report was realized according to the internal quality procedures of Abich S.r.l. The study was carried out, where applicable, according to the principles of Good Clinical Practice. All relevant observations and data recorded during the test are included in this study report.

2 PARTE SECONDA / PART TWO – PROTOCOLLO SPERIMENTALE / STUDY DESIGN

2.1 Scopo del test / Purpose of the test

Lo scopo di questo test è valutare la tollerabilità di un prodotto cosmetico individuandone i possibili potenziali irritanti e/o sensibilizzanti.

A questo fine, la sperimentazione è stata condotta su 28 volontari di cui 14 con pelle sensibile, i quali sono stati sottoposti a 4 patch in 4 settimane e contemporaneamente hanno utilizzato il prodotto a casa.

The purpose of this test is to evaluate the tolerability of a cosmetic product by identifying possible potential irritants and/or sensitizers.

To this end, the experiment was conducted on 28 volunteers, 14 of whom had sensitive skin, who underwent 4 patches in 4 weeks and at the same time used the product at home.

2.2 Metodo utilizzato / Used method

Un primo patch test viene eseguito su tutti i volontari lasciando il prodotto in esame a contatto con la cute per 48 ore mediante utilizzo di un cerotto semioclusivo (modello Curatest® F, cerotto per test epicutanei, Lohmann and Rauscher International GMBH and Co., Rengsdorf, Germany) in quantità sufficiente a riempire un disco di reazione con superficie di 1 cm² (approssimativamente 0.07-0.1 ml).

Terminate le 24 ore, il cerotto viene rimosso e vengono analizzate le reazioni dopo 15 minuti, 1 ora e 24 ore. Nelle 3 settimane successive i volontari si sottopongono ad altri 3 patch test. L'ultimo patch test è un patch indicatore che mostra un possibile potere sensibilizzante; questo patch indicatore viene lasciato a contatto con la pelle 48 ore e le reazioni vengono valutate dopo 15 minuti, 1 ora e 24 ore dalla rimozione del patch.

La valutazione è sempre effettuata in parallelo con un controllo negativo, preparato come segue: 1) se il prodotto è saggiato puro: patch vuoto; 2) se il prodotto è diluito: patch con circa 0.07-0.1ml di acqua oppure di olio minerale (a seconda del solvente utilizzato).

Il test è stato effettuato in modalità singolo cieco, sotto la direzione clinica di un Medico specialista in Allergologia con documentata esperienza in studi clinici, e con la supervisione di un Medico specialista in Dermatologia.

A first patch test is performed on all volunteers by leaving the product under test in contact with the skin for 48 hours using an semi occlusive plaster (model Curatest® F, patch for epicutaneous tests, Lohmann and Rauscher International GMBH and Co., Rengsdorf, Germany) in sufficient quantity to fill a 1 cm² reaction disc (approximately 0.07-0.1 ml).

After 24 hours, the patch is removed and reactions are analyzed after 15 minutes, 1 hour and 24 hours.

In the following 3 weeks, the volunteers undergo another 3 patch tests. The latest patch is an indicator patch that shows a possible sensitizing power; this indicator patch test is left in contact with the skin for 48 hours and reactions are evaluated 15 minutes, 1 hour and 24 hours after patch removal.

The evaluation is always carried out in parallel with a negative control, prepared as follows: 1) if the product is tested pure: empty patch; 2) if the product is diluted: patch with about 0.07-0.1ml of water or mineral oil (depending on the solvent used).

The test was performed in single-blind mode, under the clinical direction of an Allergy Specialist with documented experience in clinical trials, and under the supervision of a Dermatology Specialist.

www.abich.it

2.3 Valutazione preliminare / Preliminary evaluation

Ai vari tempi di osservazione (15min, 1 ora e 24 ore dopo la rimozione del patch) l'area è stata attentamente esaminata da due valutatori, separatamente, secondo i parametri riportati nella tabella 1. Ogni parametro è stato valutato secondo una scala da 0 a 3 per esprimere i diversi livelli di gravità delle reazioni osservate. Ogni altro effetto indesiderato locale e sistemico, anche puramente soggettivo, è stato registrato.

At each observational time (15min, 1h and 24h after patch removal) the application area was carefully examined by two evaluators, separately, for the parameters reported in table 1. Each parameter was scored with values ranging from 0 to 3 to express increasing severity of the observed reactions. Any other undesirable local reaction and subjective effect were also observed and registered.

Tabella 1 / Table 1

Punteggi per le reazioni cutanee osservate / Evaluation scale for skin reactions

Eritema Erythema	Edema Oedema	Secchezza/Desquamazione Dryness/Desquamation	Vescicole Vesicles	Punteggio Score
Nessuno / None	Nessuno / None	Nessun segno No signs	Nessuna / None	0
Lieve eritema, appena visibile <i>Slight erythema, hardly noticeable</i>	Lieve edema (bordi della lesione rilevati e ben definiti) <i>Slight oedema (edges of area well defined by definite raising)</i>	Secchezza e lieve desquamazione (cute liscia) <i>Dryness with slight desquamation (smooth skin)</i>	Molto piccole (appena visibili) <i>Very small vesicles (barely visible)</i>	1
Arrossamento modesto e uniforme <i>Moderate and uniform redness</i>	Edema moderato (bordi della lesione rilevati circa 1 mm) <i>Moderate oedema (raised approximately 1 mm)</i>	Moderata desquamazione <i>Moderate desquamation</i>	Piccole ma chiaramente visibili, coi bordi ben delimitati <i>Clearly visible, small vesicles (well-defined contours)</i>	2
Arrossamento grave e uniforme (con o senza soluzione di continuità e/o escare) <i>Severe and uniform redness (w/w.o. wounds and/or eschar)</i>	Edema grave (bordi della lesione rilevati oltre 1 mm ed estesi oltre l'area esposta al prodotto) <i>Severe oedema (raised more than 1 mm and extending beyond the area of exposure)</i>	Grave desquamazione <i>Severe desquamation</i>	Grandi, ben definite <i>Large, well-defined vesicles</i>	3

2.4 Analisi dei risultati e classificazione del prodotto / Results analysis and product classification

I punteggi assegnati da entrambi i valutatori per i parametri considerati (eritema, desquamazione, edema e vescicole) sono stati registrati per ciascun volontario. I dati sono stati considerati cumulativamente per tutto il panel di volontari. Ciò ha consentito di estrapolare l'Indice Medio di Irritazione (MII, Mean Irritation Index). Confrontando il risultato ottenuto da ciascun valutatore, il prodotto è stato classificato sulla base dell'indice medio di irritazione più elevato, secondo gli intervalli di valori indicati nella seguente tabella (tabella 2):

Sede legale e laboratori

Via Quarantadue Martiri 213/B
 28924 Verbania (VB), Italia

Tel. +39 0323 586239
 Fax +39 0323 496877
info@abich.it

Centro Studi Clinici e Cosmetologici

Via Cadorna 67 Edificio A1,
 20055 Vimodrone (MI), Italia

www.abich.it

Scores assigned by both evaluators, for erythema, desquamation, oedema, and vesicle were registered for each volunteer. They were cumulatively considered. This allowed extrapolate the Mean Irritation Index (MII). By comparing the results obtained by each evaluator, the product was classified based on the highest average irritation index, according to the ranges of values indicated in the following table (table 2):

Tabella 2 / Table 2

MII	CLASSI / CLASSES
≤ 0.4	Non irritante / Not irritant
$0.5 \leq MII \leq 1.9$	Leggermente irritante / Slightly irritant
$2.0 \leq MII \leq 4.9$	Modestamente irritante / Moderately irritant
$5.0 \leq MII \leq 8.0$	Estremamente irritante / Strongly irritant

Nota: i risultati sono stati interpretati secondo ISO 10993-23:2021 – “Biological evaluation of medical devices — Part 23: Tests for irritation” che stabilisce la soglia di positività al valore 0.4.

Sulla base di questo criterio, l'effetto di reattività cutanee modeste, che sono spesso osservate a causa delle condizioni di esposizione esagerate tipiche di questo test, non ne influenzano l'interpretazione finale.

I punteggi di MII ottenuti vengono approssimati per eccesso alla prima cifra decimale.

Note: results were interpreted according to ISO 10993-23:2021 – “Biological evaluation of medical devices — Part 23: Tests for irritation” which is applies a 0.4 cut-off for positive outcomes.

On this basis, the effect of modest reactivity, which is often observed due to the exaggerated exposure conditions of this test, do not influence the final interpretation.

The MII scores obtained are rounded up to the first decimal place.
